 In the main page I didn't see anything important so I try to do fuzzing to see if there is any hiddin directory but I didn't see anything so I try to do fuzz in header by using fuff but a didn't see anything also

 So, I see in the main page only one word it's Param and I see comment also <!-- GET --> so I think maybe the solution is hiddin parameter by get method so I try to do fuzzing in get parameter

But I didn't see anything but I see the background for the page to hackthebox so I try write parameter called hackthebox or htb and when I try htb I see the flag in the page
